

FULL STACK DEVELOPER

EFE EMMANUEL OBARO

Lagos, Nigeria | efeemmanuel2030@gmail.com | [Linkedin](#) | [Github](#)

PROFESSIONAL SUMMARY

A result driven Full stack Developer with 2 years of experience designing, building, and maintaining scalable software solutions. Skilled across the full stack from frontend and backend development to database architecture, with a strong focus on writing clean, efficient code and building systems that scale with business needs.

TECHNICAL SKILLS

- **Languages:** JavaScript, Typescript, PHP, python
- **Frameworks:** Node.js, Nest.js, React.js, Next.js, Laravel
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Tools:** Docker, Git/GitHub, Postman
- **Other:** system Design

EXPERIENCE

Full stack developer | [Grapevine Innovate Ltd - Remote](#)

[Olorimarket E-commerce Web app](#)

- Optimized frontend performance for an ecommerce web application, improving page load speed and overall user experience.
- Integrated Pay stack payment gateway to enable secure, seamless transactions for customers
- Built responsive product listing and checkout flows, ensuring a smooth shopping experience across devices.
- Implemented user authentication and order management features to support a complete end-to-end shopping experience.

Full stack developer | [Grapevine Innovate Ltd - Remote](#)

[Fleevigo Battery swap system](#)

- Implemented QR-code scanning for battery and bike identification in the rider and partner swap flows, and debugged a real production issue where scans silently failed on iOS Safari, tracing it to a browser security policy blocking a background script the scanner depended on.
- Built UI and API integration for a bike hire-purchase loan feature, including payment schedule displays and status tracking, working with M-Pesa payment callbacks.
- Added a fallback flow for confirming battery swaps manually when the automatic IoT hardware check was unavailable, including a new backend endpoint and a guided form on the partner app.
- Worked on the notification system (email via SendGrid API, SMS via multiple providers) and helped migrate email sending away from SMTP after running into port restrictions on the cloud host.
- Fixed data-consistency bugs in the admin panel around partner-to-station lookups and loan account displays, and contributed to the CI/CD setup using Docker and GitHub Actions for staging/production deploys.

PROJECTS

[Referchain](#)

ReferChain is a digital referral platform that replaces Nigeria's informal, paper-based hospital referral system with a tracked, shareable patient record, complete with QR codes that follows patients across every facility they visit.

- Built a role-based patient referral platform (Django REST Framework, React) enabling Nigerian hospitals to digitally create, track, and transfer patient records across a multi-hospital referral chain.
- Designed a central patient-ownership data model with query-level access control, ensuring records persist and stay accessible across facilities while preventing cross-hospital data leaks.
- Implemented a referral state machine (pending → accepted → completed/rejected) with signal-driven email notifications and QR-code generation for patient identification at receiving hospitals.
- Optimized performance with Redis caching (django-redis) on high-traffic endpoints and graceful fallback to local memory cache, plus JWT auth with automatic token refresh via Axios interceptors.

SOFT SKILLS

- Team Collaboration
- Communication
- Problem Solving
- Attention to Detail
- Continuous Learning

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science

Ambrose Alli University, Ekpoma, Nigeria

(2020 - 2024)
